RE: Peter Christensen, DOB: 06/02/1981, PT ID #4767554

To Whom It May Concern:

On August 29, 2018, Peter Christensen was seen in our office for treatment of an acute reaction to a wasp sting; his reaction included hives and swelling of the hand and lips. Peter was diagnosed with an allergic reaction to wasp venom and advised to take Allegra and Zantac twice a day for the next 3-4 days as well as Aleve as needed. He was also given a Rx for an epinephrine 0.3mg/0.3 ml injection pen (EpiPen) and instructed that he must have it on his person at all times and that, if he used, he must immediately summon 911 for emergency evaluation and management.

There is no way to predict the severity of Peter's reaction to another sting though, in general, the reaction tends to be worse with each exposure. Peter's allergy could quickly become life-threatening and he has been strongly counseled to exercise caution while outdoors particularly when there is evidence of wasps or bees in the area.

Sincerely,
